SurveyWorks

Rhode Island's Annual School Survey

Results Briefing

September 28th, 2021

Survey Overview

Survey Content

The surveys are focused on important topics that students, teachers, staff, and families are equipped to provide feedback about, including:

Students	Teachers/Support Professionals	Building Administrators	Families
<ul style="list-style-type: none">● Sense of Belonging● School Climate● School Engagement● Rigorous Expectations● Teacher-Student Relationships● SEL● Cultural Awareness & Action	<ul style="list-style-type: none">● Educating All Students● Professional Learning● School Climate● Resources● School Leadership● Cultural Awareness & Action● SEL● Professional Learning about Equity	<ul style="list-style-type: none">● Professional Learning● School Climate● Leadership● School Resources● Cultural Awareness & Actions● Professional Learning about Equity	<ul style="list-style-type: none">● School Safety● School Climate● Family Support● Family Engagement● Cultural Awareness & Action● SEL
<i>*The full suite of included core topics is reviewed here.</i>			

Changes in 2021

RIDE Rhode Island
Department
of Education

To support a survey administration during the pandemic, we made three key changes to support the program this year:

New Content

- The RIDE project team aligned around a few new items for inclusion, namely a topic for students, staff, and families titled *Cultural Awareness and Action*.

Family Survey Accessibility

- Previously, all families accessed surveys by entering a custom code at ***surveys.panoramaed.com/ride***.
- This year, we placed all family surveys behind one link (***bit.ly/ridefamilysurvey***) which ensured ease of access, portability of survey links, and streamlined communications.

COVID-19 Context

- Each survey included a question "*How have you participated/attended in school this year?*" to help assess the impact of learning online vs. in school across various topics.

SurveyWorks Response Counts

RIDE Rhode Island
Department
of Education

	Spring 2017	Spring 2018	Spring 2019	Spring 2020	Spring 2021
Student (3-12)	85,965	86,736	89,630	83,713*	73,078**
Teacher/Staff	10,486	11,206	11,596	11,435*	10,972
Family	19,214	21,559	24,688	25,489*	28,027

**School shutdowns began about three weeks before the originally planned close of the Spring 2020 survey window.*

***Nationally, we have seen student survey response rates decline during the pandemic and RIDE's trend matches that in 2021.*

What is one thing that is going well that you would like to see continued with how your child is learning right now?

Learning new things with the staff	I do believe her teachers are doing a great job.
The teacher makes the lessons engaging and interesting for the students.	Teacher's are communication more with the parents regarding schools work and participation.
Inclusivity, safety, challenging academic curriculum	Growing as an individual
Staying focused with all the disruption over the least year is a big win	Communication between parents and faculty
My child has had great teachers at the school.	As long as Principal Riley is there I know my children will be taught what is needed along with respect and no fair of communication

Strong Community Outreach & Family Engagement

System of Care Vision & Theory of Change

Vision

Families deserve a true System of Care for mental health and substance use conditions that is easy to navigate, that provides high quality care, that recognizes and addresses historical structural racism and other disparities, and that the state sustains financially and administratively.

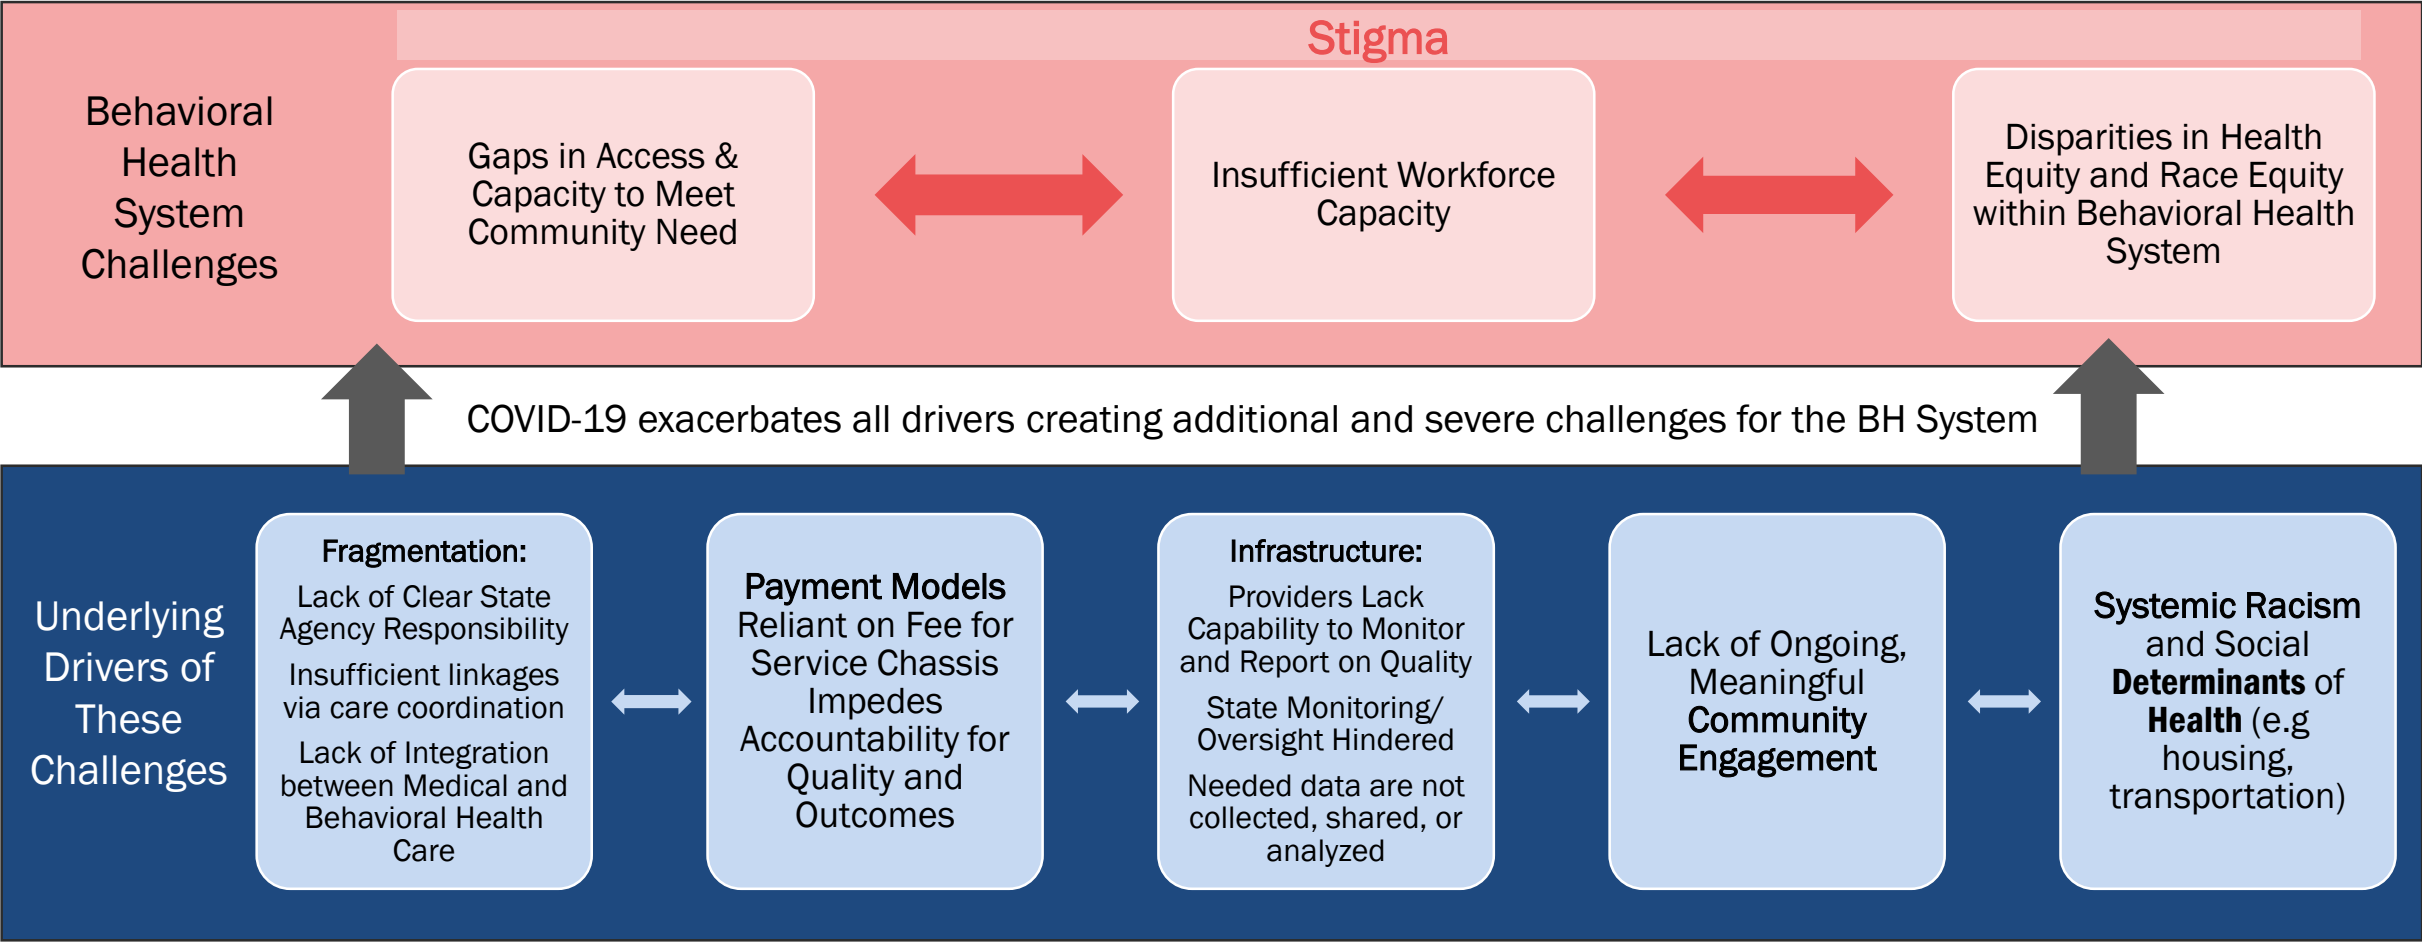

We envision a partnership among communities, youth, families, schools, government, and provider agencies that improves outcomes, increases access to services and supports, and promotes positive change in the lives of children and their families.

Theory of Change

If Rhode Island creates an integrated, culturally and linguistically competent continuum of behavioral health care for all children in the state that begins with prevention and provides an organized pathway to both ongoing care and crisis services and supports, families will be able to move away from the multiple, typically confusing paths they must deal with today and into a true System of Care that works for them. Then, our children and families will become healthier, more resilient, and ready to make plans for their futures, including participation in the state's education system and our economy.

Problem Diagnosis: Underlying Drivers, from the RI Behavioral Health System Review

Key themes have emerged from quantitative and qualitative research include challenges in the current behavioral health system, and underlying drivers of those challenges. Any policy solutions must address the underlying drivers, otherwise the challenges will persist.

Children's Behavioral Health in Rhode Island Today

Lack of Clarity for Parents

Navigating the children's behavioral healthcare system in Rhode Island can be daunting, particularly when a child experiences a behavioral health crisis, especially for families of color. Parents may not know what to do, or who is available to help meet their child's needs in a culturally and linguistically competent manner.

Lack of Alignment within the System

Our current system is siloed. Responsibility for children's behavioral health services is fragmented across different state agencies. This makes it difficult for the system to deliver effective behavioral healthcare to all of our children and families in Rhode Island.

Need for a More Organized System

Rhode Island needs an integrated, culturally and linguistically competent continuum of behavioral health care for all children in the state that will provide an organized pathway to services and supports, in contrast to the multiple, typically confusing paths that are in existence today.

Quantitative Data

Higher Acuity and Severity of Concerns—Locally

- In late May 2021, the Rhode Island Department of Health (RIDOH) and community partners (i.e., Bradley and Hasbro hospitals) informed EOHHS that Rhode Island appears to be having an increase in suicide-related emergency department visits.
 - An increase in both the number and severity of attempts among youth and adolescents under the age of 18 was identified.
 - Recent severe ingestions of over-the-counter medications have resulted in brain injury, liver failure, and high levels of care (e.g., Pediatric Intensive Care Unit).
 - The concerns are likely due to unintended consequences of COVID-19 and remain a concern as we recover into the fall and winter.

**Highest Acuity Patients
Seen in EDs**

**Even Greater Volume of
Youth Behavioral
Health Concerns
Hidden to Providers**

Rising Youth Behavioral Health Concerns—Nationally

- According to the National Institute for Health Care Management, there has been a 74% increase in depression for children ages 12-17 when comparing 2004 and 2019 data:
 - Adolescent girls are over 2x as likely to have an episode of major depression
 - Mental health emergency department visits increased 24% for children ages 5-11 and 31% for adolescents ages 12-17 between mid-March and October 2020 compared to the same time period during 2019
- The Centers for Disease Control and Prevention released a [*Morbidity and Mortality Weekly Report*](#) on June 11 that confirmed an increase in emergency visits for suspected suicide attempts among youth.
 - By May 2020, Emergency Department visits for suspected suicide attempts began increasing among adolescents aged 12-17 years—particularly among females.
 - The weekly mean number of these visits in this population of females from February through March 2021 was 50.6% higher than during the same period a year earlier.
 - Further, the proportional of mental health-related emergency visits among adolescents aged 12-17 years increased 31% in 2020 compared to the same time period in 2019.

Provider and Partner Concerns from the Field

Our partners, including the Pediatric Advisory Council, psychiatric hospitals, Primary Care Physician Advisory Committee, Regional Prevention Coalition event attendees, and Child Wellbeing Group have noted the following concerns related to youth behavioral health as we recovery from the pandemic:

- “...the severity of suicide attempts appear to be increasing, with ingestions leading to liver damage and brain injury in youth.”
- “...youth behavioral health needs are what is driving increases in many of our pediatric office visits.”
- “...youth anxiety, depression, social isolation, disengagement, and poor sleep remain as specific issues identified recently with our pediatric patient visits.”
- “...concerned about social media addiction, lack of mealtime structure, parental distress, significant weight gain, eating disorders, and use of THC/hallucinogens in our youth.”

Spikes in common diagnoses: Depression, Anxiety

Anxiety for Adolescent females, Commercial insurance shown | Similar trends for Medicaid and for Depression

★ Statistically significant change from prior year ($p < 0.05$)

Rate for Selected Diagnosis per 1,000 Kids in Selected Population
Diag: Anxiety | Age: 12-18 | Gender: Female | Payer: Commercial

Counts of Kids with Selected Diagnosis
Diag: Anxiety | Age: 12-18 | Gender: Female | Payer: Commercial

Sampling of Qualitative Data

Additional Problem Diagnoses/Gaps from Community Partners

WORKFORCE Recruitment and Retention - Here are quotes from Work Group participants:

- Need to incentivize people to stay in Rhode Island – bonuses, or loan forgiveness?
Need to raise rates so that wages can increase over time to incentivize consistency – and the workforce needs recognition and professional development
- Need to set goals to increase race equity and diversity of staff
- Need to think about part-time employees, especially for disability services for children
- Important that employees get more credentials as time goes by – stay in the field and then get licensed (because someone can get better paid at Target stocking shelves). Employees need to be valued and honored, with a respectful job title and rate of pay.

Plan Details

The Plan includes the following sections for each of the Plan Components.

- Goals/Objectives
- Current System Descriptions
- Major Activities & Primary Audiences
- Services
- Outcomes/Metrics/Milestones
- Data Sources
- Flags: Most Important Alignments
- Barriers and Challenges
- Policy Changes Required
- Timeline Considerations
- Recommended Alignments with Other Planning Processes

Example, excerpted from the Mobile Crisis Plan

Goal: The goal for a Mobile Response and Stabilization Services (MRSS) is to have services that can intercede before urgent behavioral situations become unmanageable and costly emergencies.

Current System Description: Today, there is one mobile crisis service provided through a CCBHC expansion grant received by Thrive and Community Care Alliance, with Tides Family Services as the subcontracted vendor to provide this service. This grant only allows for 75 families to be served per year. There are other providers who provide mental health professionals in police ride-along services, but these are not stand-alone mobile crisis services staffed only with mental health professionals. BH Link has some mobile crisis capacity for individuals ages 18 and older, however this is not a 24-hour service. To fully implement MRSS statewide will require significant capacity building.

Example, excerpted from the Mobile Crisis Plan

Major Activities:

- The crisis is defined by the caller.
- Services are available 24 hours a day, 7 days a week.
- Rapid response. (e.g., Connecticut by phone or face-to-face within 45 minutes, Massachusetts face-to-face within 1 hour)
- Serve children and families in their natural environments, for example, at home or in school.
- Immediate de-escalation/stabilization of the crisis along with development of an individualized, strengths-based safety/crisis plan with the child and family.
- Can serve as gatekeepers for admission to higher levels of care, such as inpatient care.
- Include specialized child and adolescent trained staff and do not rely on predominantly adult-oriented crisis response workers.
- Standardized screening and assessment.
- MRSS teams have immediate access to psychiatric consultation for clinical support and medication review.
- Provide stabilization services after the initial acute intervention. These services may include in-home supports, respite care, and short-term care coordination.
- This stabilization component of MRSS may be provided over the span of a few days or over several weeks (e.g., MA up to 1 week, CT up to 6 weeks).
- Coordinate care with existing providers.
- Build on natural support structures and reduce reliance on hospitals and formal crisis response systems.
- Connect families to follow-up services and supports, including transition to needed treatment services.
- Standardized core training curriculum with a race equity lens.
- Have specialized teams and/or training for serving I/DD children and youth, LGBTQ+ Populations, Children and youth in foster care
- Is accessible to all children in the state, regardless of system involvement, insurance status, or geographic location.

Example, excerpted from the Mobile Crisis Plan

Outcomes/Metrics/Milestones:

- Reduction in use of restrictive forms of care (e.g., psychiatric hospitalizations, residential treatment centers and repeat hospitalizations)
- Reduction in # of ED visits and repeat visits
- Reduction in overall system costs
- Reduction health disparities in race, language, and physical ability
- Family satisfaction with the services.

Data Sources:

- Map current points of access (emergency rooms, Kids Link, urgent care, child psychology/psychotherapy) against incidence of behavioral health crisis need by zip code
- Behavioral health-related ED visits, urgent care, and IP admissions
- DCYF and 911 calls for children's behavioral health reasons
- Mobile Crisis vendor data

Example, excerpted from the Mobile Crisis Plan

Barrier & Challenges:

- A core component of MRSS is to assist youth and families in accessing and linking to ongoing support and services, including intensive clinical and in-home services. At present, there is insufficient capacity of services to implement after MRSS, most critically intensive in-home services.
- The development and implementation of MRSS for children needs to be aligned with other state and federal initiatives including the EOHHS Mobile Crisis Services Task Force that is responsible for the development of recommendations and standards for mobile crisis for both adults and children throughout the state, and the 988 Federal initiative.
- Workforce issues are a critical area that needs to be addressed. Rhode Island is currently experiencing a severe shortage of mental health professionals. There are many workforce challenges, such as consistent underfunding and difficulties attracting and retaining a stable, highly trained, workforce. For mobile crisis services, CMS is recommending that states enhance crisis provider reimbursement rates to reflect cost of making 24/7 “on call” mobile crisis services available to Medicaid enrollees through the 85% enhanced federal match on these services for three years (beginning in April 2022). In addition, there is a significant need to identify and recruit professionals into the workforce to enhance its representativeness relative to the population served, with respect to race, ethnicity, culture, and language.

Next Steps: Providing Feedback and Staying Engaged

Next Steps: Feedback and Continued Community Engagement

- Seeking input and feedback from community partners: Children's Cabinet membership, parents & youth, providers, and advocates.
 - EOHHS will send out the plan this week for comment.
- Moving toward implementation, continuing our public/private Work Groups and seeking Champions to help promote the plan throughout the state.
 - Contact Ellie Rosen to get involved: Ellie.Rosen.CTR@ohhs.ri.gov

Appendix: Additional Data Slides – Quantitative and Qualitative

Spikes in less common diagnoses: eating disorders, insomnia

★ Statistically significant change from prior year ($p < 0.05$)

Rate for Selected Diagnosis per 1,000 Kids in Selected Population
Diag: Eating Disorder | Age: 12-18 | Gender: Female | Payer: Commercial

Counts of Kids with Selected Diagnosis
Diag: Eating Disorders | Age: 12-18 | Gender: Female | Payer: Commercial

We see differences in care and diagnosis by gender at the highest acuity levels (suicidality)

Rate per 1k adolescents in Medicaid diagnosed with suicidal ideation in first six months of each year

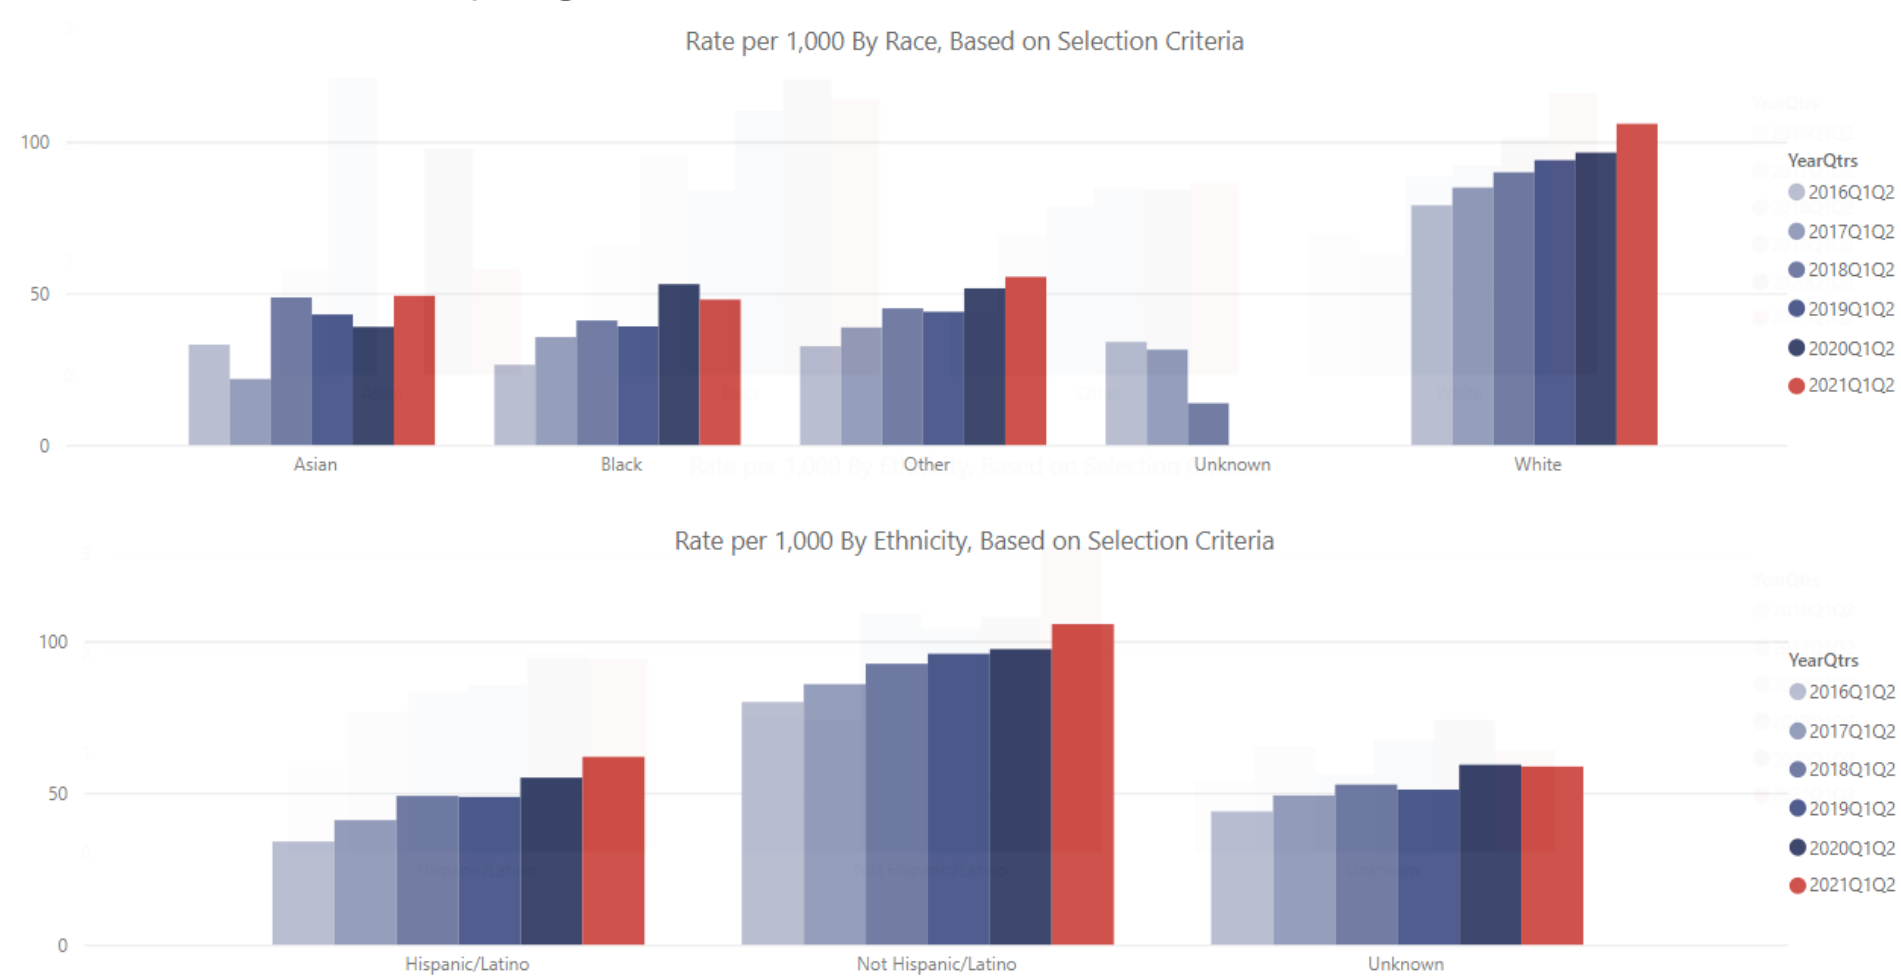

Rate per 1k adolescents in Medicaid diagnosed with suicide attempt in first six months of each year

White and Non-Hispanic children are diagnosed with anxiety at twice the rate of children of color, likely indicating access and engagement concerns

Adolescents with anxiety diagnosis, by race (top) and ethnicity (bottom) – first six months of each year

The gap between children and youth of color and white children and youth for anxiety is one of the largest (2x-3x) and affects the most kids because prevalence is so high.

Timely treatment for anxiety may alleviate more advanced expressions of mental health challenges.

Source: Medicaid claims data, January 2016 – July 2021. Note that claims for April, May, June and July are between 25% and 75% complete, with completion rates declining in more recent months.

Suicide attempt rates are similar for white children and Black children, though a significant gap persists for Hispanic and non-Hispanic children.

Adolescents with suicide attempts, by race (top) and ethnicity (bottom) – first six months of each year

Source: Medicaid claims data, January 2016 – July 2021. Note that claims for April, May, June and July are between 25% and 75% complete, with completion rates declining in more recent months.

Additional Problem Diagnoses/Gaps from Community Partners

Participants in our public/private Work Groups added critical problem statements to the plan.

CAPACITY & ACCESS - Here are quotes from Work Group participants:

- There are significant access and capacity issues in HBTS and other services. Need a more robust clinical continuum, with increased attention to geographic capacity.
- Lack of availability of adequate workforce (licensed staff) is a crisis. Not enough training. If staff aren't trained to do a robust assessment, it might turn into more ED visits.
- We have made multiple proposals to the administration about the need for intensive community-based treatment, and thoughts about capacity of therapeutic foster care to serve children in least restrictive environment.
- Lack of mobile treatment capacity
- Many silos in care coordination

Additional Problem Diagnoses/Gaps from Community Partners

EQUITY - Here are quotes from Work Group participants:

- Some of the injustices that need to be focused on are the criminalization of BH on communities of color, as well as destigmatizing BH needs within communities of color, which also includes changing the narrative of what getting MH help looks like. It's not one route to therapy but looking at holistic approaches and normalizing that.
- There's not enough of an individualized approach to what children need—whether they're more concrete services, or home-based services. There are few options of choice. There is a shortage of services, but we haven't placed enough value on the cultural alignment of services – and we have a lack of a diverse provider population.
